ATTACK SUB

AVALON HILL'S TRADEMARK FOR ITS GAME OF CONTEMPORARY SUBMARINE WARFARE

The Avalon Hill Game Company
RULES OF PLAY

1. COMPONENTS

1.1 CARDS: There are two types of cards. The 128 playing cards are called "Action cards". The larger cards are a representative sample of the navies of the world and are called "Ship cards".

1.2 ACTION CARDS: Each Action card contains an illustration and name of its function, a quantitative modifier or strength, and a Random Number (hereafter referred to as RN) ranging from 0 to 7 (or the Malfunction symbol "X") at the top center used to resolve chance situations. At the bottom of each card is a "hit" result for resolving successful attacks.

1.3 TERMINOLOGY:

SUBMARINE: Any "Ship" card labelled "SS", "SSN", "SSGN", or "SSBN".

SURFACE SHIP: Any Ship card that is not a Submarine.

SHIP: Reference to Surface ships and/or Submarines.

SURFACE FORCE: All Surface Ships owned by one player. Only one player can have a Surface Force.

<: is less than

>= is greater than or equal to

1.4 COLOR-CODING: Black Action cards are used only during a player's own turn. Red cards are used only during an opponent's turn. Cards which have both black and red corner symbols can be used in either player's turn.

Lost pieces may be replaced by sending a stamped, self-addressed envelope to TAHGC, 4517 Hartford Rd, Baltimore, MD 21214 and requesting a current Replacement Parts list or calling 1-800-999-3222 Toll Free to place an order with any major credit card.

2. SETUP

2.1 SHIP MARKERS: Select a scenario to be played and cut cards for the right to choose sides. The player drawing the highest RN selects his side; the loser gets the first turn. Each player places the Ship cards for his side in front of him. Place two square system markers of the same color on each Ship in the maximum value boxes of its "Sensor Value" and "Attack Value" Tracks. Place a third square system marker of the same color beneath and pointing towards the maximum value box of the Ship's Current Detect Value.

The technical information printed gray on the Ship cards is not relevant to play and is included for reference purposes only. The displacement value for Surface Ships reflects a "full load" under combat conditions. Surface Ships are not drawn to scale. Refer to the "length" specifications for a truer reflection of actual size. Submarines, on the other hand, are drawn to scale. Their Displacement and Speed figures reflect submerged status.

2.2 CONTACT MARKERS: Submarines place one circular Contact marker matching the color of their System markers on the "No Contact" space of each opposing Ship's Contact Level Track. Surface Ships, because they share Contact information, place one of their Nationality markers on the "No Contact" space of each opposing Submarine's Contact Level Track. NOTE: A Ship's Contact Level Track records the level of contact that opposing Ships have on it—not its level of contact on opposing Ships. These markers will be adjusted along their respective tracks during the course of play.

2.3 HAND SIZE: Each player is entitled to hold a number of Action cards which compose his "Hand" out of his opponent's view. A player's Hand size is equal to three cards plus an additional card for every Ship not playing dead (5.5) and currently airborne Helicopter in his force.

EXAMPLE: A player whose force consists solely of the Moskva and three airborne Helicopters has a maximum Hand Size of seven; three plus one for each of the Helicopters and the Moskva.

Deal each player a number of cards equal to his starting Hand size and place the remainder face down in a Draw pile. As Action cards are used or discarded, they are placed face up in the Discard pile. If discarding more than one card at a time, the discs can be placed as a group so that the opponent can view only the top discard. When the Draw pile is empty, shuffle the Discard pile and use it as the new Draw pile. To record the passage of time, place a "1" circular Deck marker near the deck and replace it with the next higher number Deck marker each time the deck is shuffled.

3. PLAYER TURN

3.1 Player Turns alternate until someone achieves his Victory Conditions. A Player Turn consists of performing a maximum of one action [Exception: Battle Stations] on each ship and/or airborne Helicopter [Exception: Transports, 12.3]. A player need not predesignate those actions; that is, he may observe the results of one action with one Ship under his control and then act on another ship.
before deciding what to do with the next. There are seven types of actions which each Ship may perform in its turn:

A. Attempt to increase the Contact Rating on some/all opposing Ships by playing a “Sensor Detection” card (4.1). If a Helicopter plays a “Sensor Detection” card, it must draw a RN to see if that Helicopter is discarded (10.3).

B. Attempt to decrease the opposing Contact Rating on that Ship by playing a “Contact Reduction” card (5.2).

C. Attack one Ship by playing one or more appropriate “Weapon Lockon” cards (6.1). If a Helicopter attacks, it must draw a RN afterwards to see if the Helicopter is discarded (10.3).

D. Remove damage to that ship by playing a “Damage Control” card (6.7).

E. Decrease or increase the Contact Rating of that Ship and all opposing Surface Ships (or one Submarine) it is played against by playing an “Open/Close Range” card (8.1). Alternatively, a reinforcement may attempt to enter play with a “Close Range” card (11.1).

F. Repair a System Malfunction on that Ship by playing a “Technician” card or by drawing a RN ≥ 4 (9.4).

G. Launch a Helicopter from a Helicopter-equipped ship by playing a “Helicopter” card (10.1) as that Ship’s action.

Helicopters may perform only Actions A and C above.

3.2 REACTIVE PLAYS: A Ship may play only one red card [Exception: Battle Stations, 3.6] in response to each black card played against it during an opponent’s turn. Red “Passive Sonars” played by Ships which are not attacked or subjected to an “Active Sonar” search because the Searcher chooses not to “ping” them, do not count in the maintenance of this 1:1 ratio. There are four possible defensive plays:

A. A “Close/Open Range” card may be played to negate the effects of an opposing “Close/Open Range” card (8.5) if already in contact with the playing Ship(s).

B. An “Evasive Action” card may be played to modify the effect of a “Weapon Lockon” card (7.1).

C. A “Contact Reduction” card may be played to lessen the Sensor values of any “Sensor Detection” attempt (5.3).

D. A “Passive Sonar” card may be played to automatically increase the Contact Level of any opposing Ship using “Active Sonar” (4.22), or any attacking Submarine (6.8). The “Passive Sonar” card may be played by a Ship which is not a target of the search/attack.

3.3 HELICOPTER CHECKS: If a “Helicopter” card appears while drawing for a RN, a “Helicopter Check” (10.31) must be made for any airborne helicopters of the drawing player.

3.4 DISCARDS: A player who takes no actions during his turn must discard one or more cards. A player who takes any action during his own turn (including a Reinforcement attempt) may not discard any cards.

3.5 FILLING YOUR HAND: At the end of his own Player Turn, a player may draw enough cards to refill his Hand. Players who play red cards during their opponent’s turn must wait until the end of their own turn to fill their Hand. A player whose Hand Size is for any reason decreased beneath his current total of cards need not discard the excess, but he cannot draw new cards while currently exceeding his maximum Hand Size.

3.6 BATTLE STATIONS (BS): Anytime a player plays a “Battle Stations” card on a Ship, it may take two Actions during that turn instead of one. However, the two actions cannot be identical such as two “Close/Open Range”, cards or two “Weapon Lockons” exceeding the target Contact Level. [EXCEPTION: A Ship could play two “Evasive Action” cards provided they were different types; a “High Speed Turn” and a “Noisemaker”.] A Ship could also make two Repair attempts provided they were to different systems, or one used a “Technician” card while the other used a Random Number draw. Playing a BS card does not allow an action plus a discard.

4. SENSOR DETECTION (A/PS):

4.1 OVERVIEW: Ships locate each other by playing a “Sensor Detection” card and drawing a RN for each enemy Ship in play for which the searcher desires a stronger contact. Searching is optional; a searcher need not draw a RN to check for every opposing vessel, but if he plays a Sensor card he must search for at least one Ship. The RN is added to the Sensor value of the Ship performing the action and modified by any Contact Reduction cards played by the defending Ship (5.1). If this modified number is ≥ the target Ship’s current “Detection Value”, move the Contact marker of the searcher one box to the right on the target’s Contact Level Track.

4.2 ACTIVE/PASSIVE SONAR (A/PS): A Submarine may not play a Sonar card against a Helicopter. Some Sensor cards contain both Active and Passive (A/PS) capabilities and may be used either way at the owner’s option.

4.21 ACTIVE SONAR (AS): An “Active Sonar” card may be played only during a player’s own turn and adds one to the Sensor value during that turn. When playing an “Active Sonar”, the player must designate the target(s). Other opposing Ships, whether a Sensor attempt is resolved against them or not, may play a “Passive Sonar” even though the black card wasn’t directed at them.

4.22 PASSIVE SONAR (PS): A “Passive Sonar” card may be played either during one’s own turn or during the opponent’s. If played in a friendly turn, the searcher’s Sensor Value is not increased; however, the searcher is immune to the defender’s play of a “Passive Sonar” card. When any opponent uses an “Active Sonar” card in a search attempt, any defending Ship may play a “Passive Sonar” card to increase its Contact Level on the searching Ship. This “Passive Sonar” card is immediately discarded and cannot be used against other searches; however, the defender could play another “Passive Sonar” card to increase its contact against any new searchers. See 6.8 for use of Passive Sonar against attacking Submarines.

4.3 MAXIMUM/MINIMUM CONTACT: A Contact marker cannot be advanced farther than Level 4, although it can be decreased. Once reduced, Contact Levels can be subsequently increased again to 4. Contact can never be reduced lower than the “No Contact” box. Sensor cards cannot be played if all potential targets are at maximum contact levels. In general, no card can be played without a legitimate game function; that is, a Damage Control card cannot be played on an undamaged Ship or an Evasive Action card played by a Ship which is not under attack just to rid the Hand of these cards.

4.4 SUB/SURFACE CONTACTS: A Submarine’s Sensor findings belong to it alone—the Contact information is not shared between other vessels of the same side as is done with Surface Ships. Therefore a Contact marker matching the color of the system markers of the searching Submarine is necessary for each opposing vessel. However, whenever a Surface Ship/Helicopter increases the contact it has on an opponent, that new Contact Level is instantly enjoyed by all Surface Ships on its side. Thus, movement of only one Nationality marker on the Submarine’s Contact Level Track is necessary to update the Contact Level for all Surface Ships against that Submarine.
5. CONTACT REDUCTION (CR)

5.1 OVERVIEW: “Contact Reduction” cards may be played in either player’s turn. During a friendly turn, they are used to attempt to reduce the contact level that enemy Ships have on a friendly Ship. In the enemy’s turn, one may be played on each Ship in response to a “Sensor Detection” card to modify the chance of success of that and all subsequent search attempts against that Ship for the rest of that Player Turn.

5.2 FRIENDLY TURN: To reduce its current Contact level, a Ship may play a “Contact Reduction” card and draw a RN ≥ the number listed on the card. If successful, all Contact markers on that Ship’s Contact Level Track are lowered by one (moved one space to the left).

5.3 OPPONENT’S TURN: Before an opponent draws a RN to resolve a “Sensor Detection” attempt against a Ship, the defender may play one “Contact Reduction” card to modify the Sensor value used against it. Subtract the red number indicated on the card from the Sensor Value of the searching Ship. The effects of a card can only be used to modify Detection attempts against the Ship actually playing it, although it affects all attempts against that Ship for the remainder of the current Player Turn. For this reason, players should resolve each announced Sensor attempt before revealing what they’ll do with their other Ships as the presence of a played “Contact Reduction” card may discourage further Sensor attempts during that Player Turn. Only one “Contact Reduction” card can be played to assist each Ship during a single opponent’s turn.

5.4 SUB ONLY: Those “Contact Reduction” cards with a submarine silhouette in the center beneath the RN can only be used by Submarines.

To aid in easy identification, the top portion of a “Sub Only” card is light grey.

5.5 PLAYING DEAD: A Submarine may shut down all non-essential equipment and even release flotsam in an attempt to slip enemy contact as its immediate reaction to any hit upon it (including a Dug) by placing a marker on the Sub’s “Systems Shutdown” box. The declaration (which is made during the opponent’s turn) must be made after the hit resolution and before the next play. A Sub plays all Contact Levels on that Submarine by one and allows it to draw one RN in each subsequent turn. If the RN is ≥ 4 it reduces Contact by one level, or the Sub may drop Systems Shutdown status and immediately play any playable card. While in “Systems Shutdown” it may play no Black cards, take no action in its own turn, and does not add to maximum Hand Size. The only red cards it may play are:

- Contact Reduction 2
- Contact Reduction 1
- Contact Reduction 0
- Contact Reduction -1
- Sensor Detection 2
- Sensor Detection 1
- Sensor Detection 0
- Sensor Detection -1
- Passive Sonar

The drawing of a RN by a “Systems Shutdown” submarine is not an action and does not prevent the player from discarding.

6. WEAPON LOCKON (WL)

6.1 REQUIREMENTS: To attack, a Ship or Helicopter must play a “Weapon Lockon” card. The target must have a current Contact Level by the firing Ship or Helicopter ≥ the Contact number printed inside the Sensor Screen of the “Weapon Lockon” card. Targets whose current Contact Levels are “No Contact” or “No Attack” may not be attacked.

6.2 ATTACK VALUES: Most Ship cards have two Attack Values for Each damage status. The bottom value with the submarine silhouette is used to resolve attacks against Submarines. However, the top value differs depending on the Ship type. For Submarines, it is used to resolve attacks against Surface Ships. For Surface Ships it is the number of Helicopters that a Ship can support in play at one time given its current Attack Value status.

6.3 Each Ship or Helicopter may attack only one target per turn.

6.4 MULTIPLE FIRE CARDS: More than one “Weapon Lockon” card may be played in a combined attack if the Contact Level of the target equals or exceeds the sum of all the Contact Values on the “Weapon Lockon” cards used. The strength of multiple card attacks are added together, modified once by the attacker’s Attack Value, and resolved with a single RN.

EXAMPLE: An undamaged John Rodgers has a Contact Level of 3 on an opposing Victor III Submarine. The John Rodgers plays a “Weapon Lockon” card with Fire and Contact Values of 2, plus another “Weapon Lockon” card with a Fire value of 2 and a Contact Value of 1. The total of the Contact Values played is 5 which equals the Contact Level on the Submarine. The strength of the attack prior to the RN draw is 6 (John Rodgers Attack Value +2, Fire Value +2, Fire Value +2). However, because the John Rodgers played two black cards against the Submarine, the Soviet player may now play up to two red cards in reaction on that Submarine—either two “Evasive Action” cards, or an “Evasive Action” and a “Passive Sonar,” or two “Passive Sonars.” This combined attack is resolved by drawing one RN.

6.5 RESOLUTION: The fire strength on the Weapon Lockon card(s) is modified by the current Attack Value on the attacking Ship or Helicopter card and any Evasion card played by the defender. If that total plus that of a RN is ≥ the target’s Defense Value, the Ship has been hit. If not, there is no effect. If hit, draw another card from the Draw pile and apply the Hit result listed on the bottom of the card by moving the target’s Attack and/or Sensor Value markers one or two boxes to the right along their respective Tracks as directed by the card. Any target whose hit result is “Sunk”, or whose “Attack” or “Sensor Value” marker is moved into its “Sunk” box is removed from play. A hit result of “Dug” signifies that the warhead did not detonate, and therefore the target is not damaged.

6.6 DAMAGE: If a Ship is damaged, its Detection and Defense values are both reduced by one thereafter regardless of any subsequent Damage Control efforts. Show the reduced values of the Ship by sliding the Detection Value marker to the top so that it’s arrow points down at the reduced value, and placing a “?” Defense marker on the Defense box. Subsequent hits will not further reduce these values.

6.7 DAMAGE CONTROL: A damaged Ship may move a damage marker one box to the left by playing a “Damage Control” card in its turn and thereby recover lost Sensor or Attack values. However, a reduced Detection/Defense value is never restored. “Damage Control” cannot save an already “sunk” ship, nor repair a malfunctioning system.

6.8 SUB ATTACK CONSEQUENCES: Whenever a Submarine attacks, all opposing Surface Ships/Helicopters increase their Contact Level by one on that Submarine if a defending Surface Ship/Helicopter plays a “Passive Sonar” card as a reaction to that attack. Individual Submarines of the defender may each increase their Contact Level on the firer by playing a “Passive Sonar” card. NOTE: Passive Sonars...
played against Active Sonar searches (3.2) and Submarine searches are the only instances in which a Ship may play a red card in response to a black card directed against a different Ship. Such a play does not prevent that Ship from being able to play another red card against any black card directed against it subsequently during that turn.

8.5 REACTIVE PLAYS: Whenever a player plays a "C/OR" card in his turn, it may be negated by his opponent immediately playing a "C/OR" card to nullify its effects before any Contact Level markers are changed. The Ship playing the negating card must have already established contact ("No Attack" status is sufficient) with elements of the moving force. The "C/OR" card is the only allowed action for that Surface Force/Submarine in that player turn, whether it is nullified or not. A player may not play a "C/OR" card during his opponent's turn except to negate one just played by the opponent. A Surface Force can play only one negating "C/OR" card per turn.

7. EVASIVE ACTION (EA)

7.1 OVERVIEW: "Evasive Action" cards may be played to modify the strength of an attack in response to an opponent's "Weapon Lockon" card. Subtract the number indicated on the card from the attacking Ship's/Helicopter's Attack Value. One "Evasive Action" card may be used against each "Weapon Lockon" card [EXCEPTION: Battle Stations; 3.6]. Once played, the EA card is worthless against subsequent attacks and is discarded.

7.2 SUB ONLY: "Evasive Action" cards containing a Submarine silhouette beneath the RN can only be used by Submarines.

8. CLOSE/OPEA RANGE (C/OR)

8.1 OVERVIEW: A "Close/Open Range" card is played during a player's own turn to either increase or decrease Contact Levels, but it cannot be played unless the moving vessel has established a minimum Contact Level (anything above "No Contact") on an opposing Ship (Exception: Reinforcements: 11.1) that is the object of that play.

8.2 SHARED PLAYS: All Surface Ships/Helicopters must share the play of a "Close/Open Range" card, and therefore may conduct no other actions that turn (Exceptions: Reinforcements 11.1 and Transports 12.3). Submarines cannot share "C/OR" cards and must play them individually. If a Submarine plays a "C/OR" card against another Submarine, it affects the Contact Levels of only those two Submarines.

8.3 OPEN RANGE: Playing a "C/OR" to "open" the range between Ships reduces the Contact Level of the moving Submarine and all opposing Surface Ships (or one opposing Submarine of his choice) one box on their respective Contact Levels. If a Surface Force plays an "Open Range" card, the Contact Level of the Surface Force and one opposing Submarine of its choice is reduced one level on their respective Contact Levels.

8.4 CLOSE RANGE: Playing a "C/OR" to "close" the range between Ships increases the Contact Level of the moving Submarine and all opposing Surface Ships (or one opposing Submarine of its choice). If a Surface Force plays a "Close Range" card, the Contact level of the Surface Force and one opposing Submarine of its choice is increased one level on their respective Contact Levels.

9. SYSTEM MALFUNCTIONS (X)

9.1 OCCURRENCE: A System Malfunction occurs whenever an "X" Random Number is drawn to resolve a Sensor Check or Attack. When it occurs, the Attack or Sensor Check fails and a circular Malfunction marker is placed on top of the corresponding System marker of the acting Ship. That ship must apply a -1 modifier to that system value until it is repaired. Should a malfunction occur during a Helicopter Duration/Sensor Check or Attack, that Helicopter is discarded.

9.2 SENSOR MALFUNCTION EFFECTS: All Contacts of the malfunctioning Ship are reduced by one and no more Sensor checks may be attempted with that card. EXCEPTION: A Surface Ship with a malfunctioned Sensor does not reduce its existing contact marker if there is another friendly Surface Ship (not Helicopter) in play without a Sensor system malfunction of any kind.

9.3 SUBSEQUENT MALFUNCTIONS: Should a System malfunction again before it is repaired, the System marker should be replaced with a -2 circular Malfunction marker which will reduce the System value by two until it is repaired. A lone Surface Ship suffering a subsequent malfunction must lower its present Contact levels by one. Should a System malfunction a third time before it is repaired, replace the -2 System Malfunction marker with a "Down" circular marker (and in the case of a Down Sensor system, reduce all Contacts on its Contact Level Track to No Contact). The affected Ship's System may not be used, nor may that Ship attack until it is repaired at least to the -2 level.

9.4 REPAIRS: A System Malfunction is repaired to the next best step by declaring a Repair attempt as that vessel's sole action for a turn and drawing a RN ≥ 4 or by playing a "Technician" card. A single Repair operation will not return a "Down" system to full operational status—it would have to undergo three successful Repair attempts. If any Repair attempt draws an "X" RN, the system reverts to "Down" status until repaired. A Repair attempt is an Action and therefore prevents discards by that player during that turn.

9.5 RN X: Unless specified otherwise, a Random Number draw of "X" is treated as "0".
10. HELICOPTERS (HE)

10.1 LAUNCHING: Surface Ships having a Helicopter symbol in the upper right-hand corner may play "Helicopter" cards which may, in subsequent turns, be used to search for or attack Submarines. The number in the top-left triangular half of the Ship's current Attack Value status indicates the maximum number of "Helicopter" cards that Ship may have in play. As its sole action during its own turn, such a Ship may play one "Helicopter" card which is placed adjacent to the Ship.

10.2 EFFECT: A Helicopter has the same Contact Level as the Ship which launched it, but may be used on subsequent turns to perform independent Sensor Checks and attacks of its own using the Sensor/Attack values (2) printed on the Helicopter card. As such, it is considered a separate Ship for purposes of conducting Operations and determining a player's Hand size.

10.3 DURATION: Each Ship Helicopter symbol contains a circled number inside its silhouette which reflects the relative length of time any "Helicopter" card from that Ship remains in play. Each time a Helicopter is used to perform a Sensor Check or attack, a Helicopter Check must be drawn at the end of that operation for that particular Helicopter. If the RN drawn is ≥ the Helicopter Duration Number, that Helicopter may stay aloft. Otherwise, it is discarded.

10.31 HELICOPTER CHECKS: Every turn that a player with Helicopters in play draws a RN (not a Hit resolution card) which is also a "Helicopter" card or plays a "C/OR" card on his Surface Force (whether in his turn or his opponent's), he must make a Helicopter Check for each of his Helicopters in play at the end of that player turn. If the RN drawn is ≥ the Helicopter's Duration Number, that Helicopter must be discarded. No matter how many times a player draws a Helicopter RN during a turn, he is never required to make more than one Helicopter Check per turn for each Helicopter in play, plus one immediate Helicopter Check for each Helicopter after it performs an operation.

EXAMPLE: The Ussley has its one allowed Helicopter aloft. That Helicopter makes a Sensor Check, and fails the resulting Helicopter Check by drawing a "1", and is discarded. The Ussley, which has not yet performed an action, may now launch another Helicopter (if it has one) in the same turn.

10.32 BAD WEATHER: Whenever an "X" RN is drawn during a Helicopter Check, bad weather grounds all Helicopters. Discard all airborne Helicopters. No new Helicopters can be launched until the weather clears. The Surface Force player may draw one RN at the end of each of his subsequent turns to check the weather. If he draws a RN ≥ 4 the weather clears and he may launch new Helicopters in subsequent turns. This Weather Check is not considered an action and does not prevent discards.

10.4 ORPHANS: Helicopters cannot be attacked directly. However, any already airborne Helicopter whose Ship is sunk/exited is removed from play. Similarly, a ship whose Attack status declines to the point where its Helicopter Attack Value number is less than the current number of its Helicopters in the air, must immediately remove excess Helicopters.

10.5 SUB-ONLY SCENARIOS: In scenarios with no Ship capable of launching a Helicopter, "Helicopter" cards remain in play for use as RN and Damage cards, although they fulfill no useful function in a player's hand and can only be discarded normally.

11. REINFORCEMENTS

11.1 ENTRY: Some scenarios list Ships available as reinforcements. These Ships are not available at first and do not add to Hand Size until they enter play. A reinforcement may enter play whenever its owner plays a "Close Range" card for it and draws a modified RN ≥ 6. The RN drawn is added to the number of the current deck. Only one reinforcing Ship may enter per successful "C/OR" play and the second listed reinforcement may never enter before the first listed reinforcement arrives. A reinforcement's entering "C/OR" card may not be negated by an opponent's red "C/OR" play. This attempt does not count against the options of any other Ship but does prohibit discards by that player in that turn. The entering Ship may not perform any other action on its player turn of entry unless it plays a Battle Stations card after its successful entry to allow one additional action.

11.2 CONTACT: No adjustment to any Contact marker is made as a result of an entering reinforcement, although an entering Surface Ship automatically gains the Contact Level of other friendly Surface Ships in play.

11.3 DURATION: If all Ships of a side are sunk before its reinforcements enter play, the scenario ends.

12. TRANSPORTS

12.1 HIT EFFECTS: Transports have neither Attack nor Sensor values. If hit, the marker on the Damage Track of a Transport is moved one box to the right for each "Attack" or "Sensor" hit result.

12.2 HAND SIZE: Transports have no effect on a player's Hand size.

12.3 ACTION CARDS: Transports may not play any card—even "C/OR" cards played to negate a Submarine "C/OR" play affects only their escorts; not the Transports.

EXAMPLE: A Victor III Submarine plays a "Close Range" card which is immediately negated by play of an "Open Range" card by a Transport's escort. The net result is that the Submarine increases contact on the Transport but the contacts of the opposing escort and Submarine on each other remain unchanged.

13. SCENARIOS

The scenarios are hypothetical encounters based on probable situations in contemporary conflicts. Players may augment those provided with their own designs. The strategy varies a great deal from one scenario to another. Players are encouraged to sample them all rather than concentrating solely on the introductory ones.

13.1 CV SENSORS: The Kennedy has no Sensor values (-) and is dependent on its launched Helicopters to detect Submarines. However, its Sensor Value Track is still used to determine Ship damage.

13.2 CV ATTACK VALUES: The carriers Moskva, Kennedy, and INVINCIBLE have no attack values (-) and are dependent on their Helicopters to attack Submarines. Those Helicopters have an Attack Value of "2" regardless of the damage status of their carrier. However, Ships with an Attack Value of "0" may attack.

13.3 SEAWOLF: The "sweatout" torpedoes of the Seawolf allow attacks without detection by Passive Sonar (6.8).
13.4 ALFA C/OR EXCEPTION: Due to its great speed, an Alfa class Submarine's "C/OR" play cannot be automatically negated by an opponents' "C/OR" reaction. The opponent may attempt to negate the play with a reactive "C/OR" card of his own, but must also draw a RN \( \geq 4 \) for it to be successful. If the RN is \( < 4 \), the reactive card is played with no effect.

13.5 VICTORY CONDITIONS: If no other Victory Conditions are cited, the first player to sink all opposing Ships currently in play wins. However, if a scenario has no specific Victory Conditions to the contrary, a player may win by sinking one opposing vessel and subsequently exiting all of his Ships without having any sunk. If trying to win in this fashion, the exiting player may permanently remove a Ship from play by playing an "Open Range" card for that Ship if it has achieved "No Contact" status on all opposing Ships. An "Open Range" card played by a "No Contact" status Ship cannot be negated (8.5).

13A SUB DUEL: A pair of U.S. submarines have been operating too successfully in the Atlantic, sinking Soviet submarines and surface ships alike. To counter the threat, the Soviets dispatch two of their best killer submarines.

NATO: Los Angeles, Baltimore
SOVIET: Ivan Rogov, Skvortsov

13B SEARCH & DESTROY: As a NATO convoy makes its way to Iceland, a satellite update detects Soviet submarines moving toward the convoy. An ASW group is sent out on an interception course to remove the threat.

NATO: Virginia, Simpson
SOVIET: Molniya, Skvortsov

13C BREAKOUT: To feed on the rich NATO surface convoys in the North Atlantic, the Soviets form sub groups to break out from the Norwegian Sea. Waiting for just such a move, NATO submarines position themselves to intercept.

NATO: Seewolf
SOVIET: Ivan Rogov, Donets, Dekabrist

Soviets win if they can manage any combination of two sunken NATO submarines and/or exited Soviet submarines. Each Soviet submarine must gain Contact Level 1 on a NATO submarine before it can attempt to exit.

Reinforcement: Trafalgar
Reinforcement: Skvortsov

13D FALKLANDS: The Argentine submarine force was a constant threat to the British during the Falklands War. A single successful attack on either the troop convoys or carrier task forces could have spelled disaster for the entire campaign. Here a pair of Argentine subs are discovered by a patrolling British submarine.

BRITISH: Swiftsure
ARGENTINE: Salta

Reinforcement: San Luis

13E REBEL WITHOUT CAUSE: A renegade Soviet super boomer is determined to end Glasnost by starting WW III. If it reaches its firing position, several American cities will be obliterated. A Soviet surface task force has orders to find and destroy it before it can reach its firing position.

RENEGADE: Oppokov
SOVIET: Rovnoystny, Simferopol

Reinforcement: Udaloy

The Soviet Surface Force wins by destroying the boomer before it reaches its firing position. Once play has entered the second deck, the Typhoon may draw a RN every time it plays an "Open Range" card. If the RN drawn is less than the number of the current deck, the Renegade wins.

13F MOUNTING THE THREAT: As a large Soviet troop convoy makes its way toward Iceland, a NATO sub group is detected. To counter the threat, the Soviets send out an ASW screen along with whatever help they can get.

SOVIET: Udaloy, Nikolayev
NATO: Los Angeles, Valiant

Reinforcement: Kotov, Admiral Lapshin

13G TURNING THE TIDE: As the tide of war turns in favor of NATO, many of the bases lost to the Soviets in the opening rounds must be retaken. One such base lies near the town of Narvik in Norway. But the Soviets are waiting on land and at sea.

SOVIET: Sura, Donets, Storom
NATO: John Rodgers, Simpson, Taylor, 3 Transports

The Soviet wins by sinking all three Transports. Any other result is a NATO victory.

13H BOOMER: As a Soviet ballistic submarine moves toward its firing position under the northern ice floes, a NATO sub-group intercepts the "boomer" and its escort. The "boomer" must be eliminated before it poses a strategic threat.

SOVIET: Zarnitsa, Ivan Rogov
NATO: SeaWolf

Reinforcement: Asheville

Nato wins by sinking the Zarnitsa. Once play has entered the second deck, the Zarnitsa may draw a RN every time it plays an "Open Range" card which is not negated by NATO. If the RN is less than the current deck, the Soviet wins.

13I SINK THE MOSKVA: The flagship of a Soviet ASW group, the Anti-Submarine cruiser Moskva, has proven itself too effective against NATO submarines. NATO reacts by breaking from doctrine and forming a wolfpack to hunt it down.

SOVIET: Moskva, Udaloy, Neukrothimyy, Revnoystny, Tallin
NATO: Asheville, Annapolis

Reinforcement: Trafalgar
Reinforcement: Skvortsov

NATO wins by sinking the Moskva. The Soviet wins if the Moskva exits (13.5) anytime after the first deck without losing more Ships than NATO. Only Moskva—not its escorts—must exit to end the scenario. Any other result is a draw.

13J THE RETURN HOME: The Soviet carrier Kiev has operated successfully in the Atlantic since the outbreak of hostilities but needs to return to port. The battlecruiser Kirav is sent out to escort her back. All NATO submarines in the area are directed toward the force in hopes of bagging a major prize.

SOVIET: Kirav, Kiev, Neukrothimyy, Nikolayev, Tallin
NATO: Asheville, Seewolf

Reinforcement: Los Angeles

NATO wins by sinking either the Kiev or the Kirav. Otherwise, the Soviets win. Once play has entered the second deck, the Soviet may draw a RN every time he plays an "Open Range" card which is not negated by NATO. If he draws a RN less than the number of the current deck, the scenario is over.

13K FLATTOP: As NATO losses mount, they must risk the use of smaller task forces. One such force is caught leaving Norfolk by a Soviet wolfpack which has been assembled for just this task.

NATO: Kennedy, Virginia, John Rodgers, Simpson, Taylor
SOVIET: Ivan Rogov, Skvortsov, Tensey

Reinforcement: Bolshaya Neva

The Soviets win by sinking the Kennedy. NATO wins if the Kennedy exits (13.5) anytime after the first deck without losing more Ships than the Soviet. Only the Kennedy—not its escorts—must exit to end the scenario. Any other result is a draw.

13L WOLFPACK: Allied forces in Norway desperately need supplies. The Soviets are just as determined to prevent their arrival and have assembled a picket line of submarines off the Norwegian coast to contest the arrival of NATO convoys.

NATO: Invincible, Norfolk, Sheffield, Semmes, 3 Transports
SOVIET: Grif, Dekabrist, Ivan Rogov
Reinforcement: Skvortsov

Soviet wins the instant he sinks six points of NATO vessels. Any other result is a NATO victory. The Invincible is worth six points, each Transport is worth two points, and each escort is worth one point. The Soviet must immediately subtract one point from his score whenever he loses a Submarine.
NOTES FROM THE SKIPPER

When Avalon Hill first approached me about doing a modern submarine game I was somewhat worried on a more detailed simulation of modern naval combat. This posed a different type of challenge because although they wanted the game to represent the weapons and decision making of contemporary submarine warfare, they also required that it be simple to play. Those familiar with my past designs know that I've never been happy with the constraints of hexagonal maps and traditional counters. The choice to use cards rather than the more traditional hexagonal map was an obvious starting point. Action cards allow one to incorporate all random result tables and interaction in an easily used and understood manner. As a side benefit, they also allow almost any probability distribution. But most importantly, cards allow for fast play. This is a must for the less serious game player who is the primary audience for which this game was intended. One final, but overwhelming, argument for cards was that of physical appearance. With all the games currently on the market, a new owner must stand out from the crowd. To do this, a game first has to be noted and the most eye-catching device yet found in boardgames is a set of attractively illustrated cards.

With that said, I'll step down off my soapbox and address some specific design decisions. Contemporary submarine warfare can be a very complicated subject to simulate in detail. What makes it especially difficult for a simpler game is the sorting through of all the information related to the subject while retaining and emphasizing only the most important characteristics to be learned. Let's start with the detection process. In most naval combat situations the main objectives is to remove an enemy threat from an area. Invariability this is done by sinking enemy ships or rendering them harmlessly dormant. The sonar, however, while the most important consideration, is not always the primary concern. Instead, it is usually the case that the enemy has already been detected and that the primary concern is the enemy's location and time of departure. This feature allows all surface ships to use information obtained by any other surface ship. Secondly, many surface ships have helicopters. Helicopters can hover over an area, under the command of a submarine or by a submarine to carry out sonar, search for submerged submarines, or launch torpedoes against enemy ships. The first and last sound that a submarine may hear from a helicopter is a water surface vessel entering the water before it hits home. Helicopters can also be electronically linked to all the other surface ships in the area and data sent to other vessels. The advantage of using this feature is that it allows the submarine to know exactly where the enemy's next move is likely to be. The disadvantage is that it is a great deal more difficult to play. Launching a submarine in a rolling sea is not as easy as it looks. In fact, a submarine is aHEREO plays a major role in determining the location of the submarine and releasing its homing torpedo at that point. Since the torpedo must be carried by the missile, the speed of the submarine is a factor in determining the location of the submarine. Torpedoes carried by helicopters suffer from the same limitation although they are targeted to the targeted location by the helicopter rather than a submarine.

The last element of the game we'll discuss concerns the relative value of the ships themselves. Detection is directly related to the noise the ships themselves.
generates. NATO ships have always enjoyed an advantage when compared with the noise their Soviet counterparts generate. But this gap is slowly closing, especially with the new generation of submarines coming out of Russia. Thus we see ships like the Victor III with a fairly high detection rating. The Soviets also use acoustic coatings on many of their newer sub hulls which can absorb sonar signals. Probably the hardest ships to detect are the diesel/electric submarines whose electric engines are so quiet, yet require snorkeling near the surface to recharge batteries. The Soviets use a number of the latter type in their coastal waters where they are effective in area high detection. Surface ships, even when “quieted”, like many of the newer NATO ships, are generally noisier than most submarines. Knowing that they are noisier and therefore operating at a disadvantage, surface ships (and many of the noisier submarines) operate continually with active sonar believing that the best defense is a good offense.

Much of the technological advantage of the West also shows up in the quality of their sonar systems. Most NATO subs operate with not only more effective sonar, but also with “towed arrays”. Not only are these systems more effective than the usual hull mounted sonars, but they also have a greater depth range degree and are unlike hull sonars. Noise from the propellers and wake of the ship disturb incoming sound signals in an arc approximately 60 degrees astern. This dead area can be used by a good captain to approach an enemy ship undetected. To reflect this in game terms, sonar values are larger for better Sonar systems and/or if the system is a “Towed Array”.

For game purposes, attack values portray a number of different elements all rolled into one. For example, most submarines can use a number of weapons to attack a ship. The Los Angeles class submarine, for example, can fire a “Harpoon” to raise a missile against surface targets from a Mark 48 torpedo as well as a Mark 48 torpedo against either surface or submerged targets. The “Harpoon” is an excellent anti-ship missile and its +3 rating in the game reflects its high accuracy and survivability to air-defense systems. By way of explanation, it should be noted that when a defensive card such as “Evasive Action” is played against such an attack it represents not only the maneuvering of the ship, but more importantly the effective use of air-defense systems to shoot down the missile. The Mark 48 torpedo also receives a high rating. It is a wire-guided torpedo with active and passive sonar for searching and homing on its target. Even after launch a wire-guided torpedo can have its targeting data updated through the guide-wire. Once it reaches a position close enough to its target, its built-in sonar takes over. These torpedoes can prove to be very difficult to evade once a “good” weapon system lock is obtained.

I hope walking through some of the rationale behind the rules has made the game more enjoyable for you by increasing your appreciation for the realism factored into the game mechanics. Although simple, the game is far from simplistic. Players looking for a more involved contemporary naval game should watch for my next game, BLUE WATER NAVY, which includes all aspects of naval combat including surface ships, submarines, and aircraft. Check the pages of THE GENERAL for information about this and other games of skill by Avalon Hill.

QUESTIONS:
We regret that we cannot answer game questions by phone. However, we will try to answer all reasonable queries by mail provided you observe the following requests:
1. All questions must be accompanied by a stamped, self-addressed envelope bearing uncancelled U. S. postage sufficient for first class mail. Foreigners unable to secure U. S. postage may purchase an International Reply Coupon sufficient for return postage from their local Post Office. Questions cannot be returned inside other ordered merchandise—keep your questions separate from orders.
2. Do not ask questions for more than one game. If your letter has to go from one designer to another, the chances of it being lost or delayed are greatly increased.
3. Do not ask questions on design or historical subjects. This type of material is best covered in our magazine, THE GENERAL. Purchase of the recommended special feature issue of THE GENERAL covering that game is recommended.
4. Do not ask us to rewrite a rule for you or to explain it in other terms. We cannot take the time to make a complete individual essay on vague questions, nor can we possibly do so with any better results than the version you currently possess which underwent several carefully prepared drafts. Therefore, please phrase your questions in a Yes/No format and refer to the proper rule numbers when posing a question.
5. Please take the time to see if you can answer your own questions. Most questions we receive are clearly answered in the rules. When writing to us, pose your questions carefully—most that we receive are so ambiguously worded that it is impossible to give a precise answer.

THE GENERAL
Now that you know how to play the game, the next problem is probably who to play it with and how to win. We can help you with that problem, and many others, through our subscription to THE GENERAL, our monthly gaming journal. In THE GENERAL, you’ll not only read all there is to know about this game, but will also learn about our dozens of other exciting simulation games of skill. Every full-color issue is crammed full of all the features on the strategy and tactics of the games from The Avalon Hill Game Company and Victory Games. And in 1988, THE GENERAL expanded to 54 pages. Just look at what THE GENERAL offers:
Advertising: Our OPPONENTS WANTED COLUMN allows you to advertise for a minimal fee, for opponents, discontinued games or competition of any sort. Each issue contains dozens of ads which are seen by our many readers worldwide. The fastest way to find an opponent for this game, whether it is across the street or across the Atlantic Ocean, is in the pages of THE GENERAL.
Contents: In every issue, we pose challenging game situations which you can enter to win free games by utilizing your playing skills for this or any of The Avalon Hill Game Company’s many other simulations.
Tactics & Strategy: Learn why you lose or how to win. The nation’s best players and our design staff members write many thought-provoking articles on the entire gamut of games from The Avalon Hill Game Company and Victory Games. Many issues contain a SERIES REPLAY in which an actual move-by-move game by master players, professionally illustrated and with commentary by a recognized expert, is printed.
History: Curious about the events portrayed in the game? Articles in THE GENERAL explain these events and discuss parallels in other games and in other periods of history.
Game Design: Wonder why this game was designed the way it was? Read THE GENERAL and find out! Our regular DESIGN ANALYSIS column features explanatory treaties by our designers and playtesters.
Variants: Tired of the same old game? Playtested variant rules and scenarios by dedicated experts for this game, and dozens of others, are printed regularly in THE GENERAL. These bring many more hours of enjoyment, and often serve to highlight the finer points of strategy and tactics. And starting in 1986, THE GENERAL will also annnually include a die-cut variant counter sheet for select game variants. These counters will be free only to regular subscribers to THE GENERAL.
Questions Answered: In our QUESTION BOX in each issue, you’ll find the only official sources of rules interpretations and changes for this and our other games.
Product Reviews: Interested in other titles from The Avalon Hill Game Company or Victory Games? Check them out in THE READER’S BUYERS GUIDE. The RBG is a game review compiled by our subscribers at large—the people who play the games—not a self-appointed critic. Realism, complexity, components, play-balance and game time are only a few of the categories rated in the RBG.
What’s Happening: Most gamers like to know what’s going on in the gaming hobby. Each issue contains an installment of What’s Happening where we discuss developments in the industry and hobby, and generally strive to keep you informed. Full-page ads announce new titles from The Avalon Hill Game Company. In addition, the INFLTRATOR’S REPORT keeps you abreast on top game developments, awards and unusual happenings.
Value: In every issue you’ll find a value coupon to be applied against the cost of postage when purchasing games directly from The Avalon Hill Game Company.

Since its inception in 1964, THE GENERAL has stood the test of time. It remains the oldest and most-respected periodical devoted to simulation gaming on the market. And its subscription rates remain the best value. Increase your enjoyment of this and our other games many-fold with a subscription. If you’re convinced, send your check for a two-year subscription. See the PARTS LIST enclosed with your new game for prices.

**Molniya**

**CLASS:** November  
**TYPE:** SSN  
**DISPLACEMENT:** 5,000 tons  
**SPEED:** 30 knots  
**LENGTH:** 109.7m

**ARMAMENT:**  
- 8 × 533mm bow torpedo tubes  
- 4 × 400mm stern torpedo tubes  
  (32 torpedoes, mines)

**SYSTEMS SHUTDOWN 5.5**  
Option after being hit.  
Reduces Contact Level one.  
RN ≥ 4 reduces Contact Level or resume play.  
Reduces Hand Size.  
Only Playable Cards:  
- CR Surface Noise  
- CR Thermal Layer  
- PS Passive Sonar

**Oppokov**

**CLASS:** Typhoon (Imp.)  
**TYPE:** SSBN  
**DISPLACEMENT:** 30,000 tons  
**SPEED:** 30 knots  
**LENGTH:** 170m

**ARMAMENT:**  
- 20 × SS-N-20 ballistic missiles  
- 6 × 533mm torpedo tubes  
  (SS-N-15/16 missiles, torpedoes)

**SYSTEMS SHUTDOWN 5.5**  
Option after being hit.  
Reduces Contact Level one.  
RN ≥ 4 reduces Contact Level or resume play.  
Reduces Hand Size.  
Only Playable Cards:

**USS Annapolis**

**CLASS:** Los Angeles (imp.)
**TYPE:** SSN
**DISPLACEMENT:** 6,927 tons
**SPEED:** 30+ knots
**LENGTH:** 109.7m

**ARMAMENT:**
- 12 x Tomahawk vertical-launch tubes
- 4 x 533mm amidships torpedo tubes
  (Tomahawk, Harpoon, Mk-48 torpedoes, mines)

**SYSTEMS SHUTDOWN 5.5**
Option after being hit.
Reduces Contact Level one.
RN ≥ 4 reduces Contact Level or resume play.
Reduces Hand Size.
Only Playable Cards:
- CR Surface Noise
- CR Thermal Layer
- PS Passive Sonar

**USS Virginia**

**CLASS:** Virginia
**TYPE:** CGN
**DISPLACEMENT:** 11,300 tons
**SPEED:** 30+ knots
**LENGTH:** 177.3m

**ARMAMENT:**
- 8 x Tomahawk SAM/SSM; 8 x Harpoon SSM
- 2 x Mk 26 launchers (SAM & ASROC ASW)
- 2 x 127mm DP guns
- 2 x 20mm Phalanx CIWS; 4 x 12.7mm MG
- 6 x ASW torpedo tubes
**USS Asheville**

**CLASS:** Los Angeles (Imp.)  
**TYPE:** SSN  
**DISPLACEMENT:** 6,927 tons  
**SPEED:** 30 + knots  
**LENGTH:** 109.7m  

**ARMAMENT:**  
- 12 x Tomahawk vertical launch tubes  
- 4 x 533mm amidships torpedo tubes  
  (Tomahawk, Harpoon, Mk-48 torpedoes, mines)

PING... The ship reverberates with the metallic echo which brings stark terror to a submariner. Only moments before the skipper had checked the surface and found only unrelenting waves. Sonar reported no discernible screws in the area. Yet, there was no mistaking the groaning fingers of active sonar against the hull. An ASW aircraft must have dropped a sonar buoy nearby.

PING... The sound, stronger now, temporarily paralyzes everyone. Not a word is spoken. No one moves until the Captain's barked commands signal a burst of hushed activity.

"Right Full Rudder, rig for silent running."

PING... Was it fainter this time? Or just wishful thinking? Did the aircraft gain a strong enough fix on them to fire?

PING... Yes, it was definitely fainter now. They were moving away from it. The sense of relief is broken by a shout from sonar.

"Fish in the water! Bearing two-six-zero."

"Left Full Rudder, Flank Speed!"

"Bearing is changing. It has locked onto us. Bearing constant at three-four-zero. It's gone active, sir."

"Launch Countermeasures."

There is nothing left to do but wait and pray.

Such will be the life and death drama played out under the sea in the next war. ATTACK SUB is a simulation of contemporary submarine warfare that re-creates the tension of high-tech warfare beneath the waves with low tech playing cards in a fast-paced game of skill. Despite the encroachment of technology, the cat-and-mouse game between sub and surface ship that has characterized warfare at sea since men first waged war beneath the waves remains essentially unchanged as we enter the 21st century. The submarine, the lone hunter, relies on concealment to stalk its prey. The escort hunts in packs and works in concert with other surface and air elements to locate and overwhelm the solitary hunter. It is high stakes tension even in the age of computers and electronics.

Players command 48 of the world's best warships in 13 scenarios ranging from simple sub vs sub encounters to combined fleet actions. A deck of 128 quality playing cards are used to resolve the action with rules similar to those that won accolades for its sister game UP FRONT. However, unlike its award-winning predecessor, ATTACK SUB is extremely easy to learn and can be played in under an hour. Indeed, the easy-to-use components make reference to the rules almost unnecessary.
